

For Immediate Release

March 1st, 2010

Quarter 1 Boom For The UK Engineering Support Services Business

The beginning of 2010 has marked a positive development with QC Data stepping back into the UK gas distribution industry. QC Data is pleased to be deploying additional resources to undertake critical site survey and work pack validation services for 6 National Grid Alliance and Coalition partners.

The work being undertaken by QC Data is making a valuable contribution to the Alliance and Coalition partners' ultimate client, National Grid. Our efforts ensure they have complete and accurate annual network replacement records and figures to present to Ofgem.

Footprint project teams have been established with engineering contractors in the Northwest, the Midlands and North London regions. The initial projects will run throughout the early part of the year and have further potential for contract longevity and team expansion within each region.

Ian Wainwright, Managing Director UK & Ireland commented, "Our return into the gas industry is a very welcome development and demonstrates that the ability to respond to the needs of this sector has been maintained despite the economic challenges we faced during 2009."
